

Factsheet 13: Go green and save yourself money

How to save energy, money and the environment

Are your heating bills going through the roof? Here are some no cost energy saving tips to help you save money and protect the environment.

Water

- Why not have a shower instead of a bath? Showers use 25% less water.
- Always make sure your taps are turned off completely – a dripping tap can waste up to four litres of water per hour, and in one day, enough to fill a bath.
- When filling your kettle, only use the amount of water you need.
- Always use the low temperature programme on your dishwasher and where possible only turn it on when there is a full load.

Washing and drying

- Use low temperature washes – most powders work best at 30°C – 40°C.
- Always wash a full load – make the most of energy used in each wash.
- Use shorter wash cycles for lightly soiled clothes.

- Use the spin function or a spin dryer to help dry washing before using a tumble dryer.
- Dry washing outside when you can.

Heating and lighting

- Turn your thermostat down 1°C to save pounds on your heating bills, and if your radiators have thermostatic valves, set each room temperature accordingly.
- Use low energy light bulbs. They last up to 12 times longer than your standard light bulb and uses approximately one fifth of the energy – saving you money.
- Switch off lights that are not needed.

Fridges and freezers

- Don't put warm/hot items straight in the fridge – let them cool first or your fridge/freezer will have to use more energy to cool it down.
- Defrost regularly – the more ice in your freezer the more electricity is used.

- If possible put the fridge/freezer in a cool place out of direct sunlight and away from your cooker/boiler.
- Avoid leaving the fridge/freezer door open for too long – keeping it open lets the cold air out and warm air in so the appliance has to use more energy to cool down.

Electricity

- Don't leave anything on standby – when items such as TVs are left on standby they can use around 80% of the energy they use when they are fully turned on – if the red light is on it's costing you money.
- Buy energy saving appliances – not only do they use less energy they are cheaper to run. Energy saving products have a rating of either A or B. The higher the rating the less damage there is to your wallet and the environment (A the most savings – G least efficient).
- Unplug mobile phone chargers, electric shavers and similar items so you don't waste electricity.

Insulation

- Close your curtains at dusk - they act as a blanket to keep heat inside your house.
- Insulate your letterboxes by fitting a nylon brush seal or a spring flap for just £5.
- Using draught excluders is an easy and cost effective way to reduce your heating bills.

Useful Information to save you money

Did you know if you receive an income or disability benefit, you might qualify for a Warm Front

Grant from the central government?

A Warm Front Grant ranges from £1000 to £2000 depending on your age and circumstances and includes a package of free installation and heating improvements for your home.

To find out if you qualify for a grant contact the Warm Front Team on 0800 316 2805 or visit www.warmfront.co.uk

For further information on how to save energy contact the Energy Saving Trust on 0800 512 012 or visit www.energysavingtrust.org.uk
